

Note:  
Deprecation of a PKCS #11 key in  
LDAP should point to a replacing  
key, so that info should also be  
present.

Question to Rick:  
What to do if there is no new key?  
Simply dropping a key may be bad,  
if it may still be used for decryption.

Better:  
When not rolling the key for this  
identity, better also remove it  
from the localid.db
